**A few words about  
RECEMI Industrie...**

We established RECEMI Industrie 30 years ago with the ambition to manufacture high performance, innovative machines, which are easy to understand, operate and repair. RECEMI Industrie offers accurate and reliable equipment, which takes into account the evolution of the printing market's needs and also new developments in web press technology.

**Graph Expo 2011**

**September 11-14, 2011— Chicago**

RECEMI Industrie will attend next Graph Expo with its American Partner IMC America, which provides throughout North America a global sales network, and a superior after-sales support.

Thanks to the quality and innovative technology of its products and the ease of operation, RECEMI Industrie has established itself as a leading supplier of postpress equipment in North America.

Meet our team on RECEMI Industrie booth **4657** to have a look on our latest technical developments.

**Fairfax Media - Australia**

**RECEMI Industrie will supply a full post-press solution**

RECEMI Industrie will supply a full post press solution including its famous log stacker HP1200, new rotary trimmer CR3000, TP300L compensating stacker and several bundle and log palletizing systems. This system will allow Fairfax Media an innovative way to automate the way it handles its inserts all the way from the press to the post stitching system.

Recmi Industrie is delighted to be able to win this order and look forward to working together with Fairfax over the coming years.

Recmi Industrie is assisted by its local partner, Ferrostaal Australia Pty Ltd, which will be in charge of the ongoing maintenance, service and spare parts.

Through this sale, Recmi Industrie are able to further strengthen their presence in Australia which they consider to be an extremely important print market and one in which they will play an important role in the future.

**New Technology CR5000**

**High Pagination Rotary Trimmers**

High speed and high pagination web presses become higher-performance and improve production abilities and possibilities. In response to these new standards of production, RECEMI Industrie designed a new trimming technology for high pagination.

This trimming is robust and simple as per RECEMI Industrie design. It is based on specific knives that use the high accuracy milling principle. These knives allow trimming high pagination shingle stream, higher than 25 millimeters.
